(51) Int. Cl. E04B2/74

PURPOSE: To adjust the height of a post even after erection by providing an opening for adjustment on the position facing to the operating part of a screw rod on the post, and inserting a tool through the opening to operate the operation part of an adjuster.

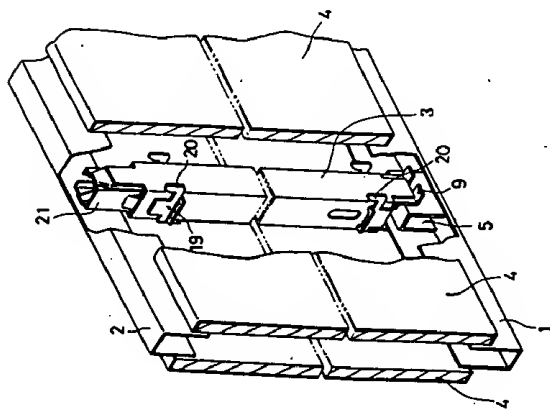

CONSTITUTION: An adjuster 4 is fitted to a floor rail 1 movably in the lengthwise direction, and on the upper face 11 threadedly engaged with a screw rod 8 in which an operation part 6 is provided on the extreme end, a flange part 7 is provided under the part 6, and movable up and down. On the lower end of a post 3, a lower bracket 9 loaded and held on the flange part 7 of the screw rod is mounted, and on the position facing to the operation part 6 of the screw rod 8, an opening 10 for adjustment is provided on the post 3. Next, the post 3 is standingly provided and fixed between the floor rail 1 and a ceiling rail, and wall panels 4, 4 are supported with the post 3. Even after the post 3 is erected, the height of the post 3 can be adjusted, only by inserting a tool 18 through the adjusting opening 10 and operating the operation part 6 of the adjuster 5.

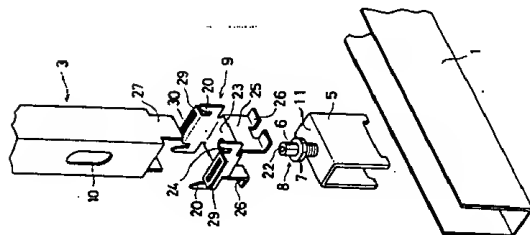

opening in vertical post
